NextEnergy[®] 3-SERIES

THE NEXTENERGY 3-SERIES GEOTHERMAL SYSTEM

The NextEnergy 3-Series uses dual compressors providing three different stages for optimal comfort at maximum efficiency to meet the heating and cooling demands of your home. This system will run in first stage when the weather conditions require only a minimal amount of heating or cooling. With increased demand, the NextEnergy 3-Series will effortlessly move to second stage, or in extreme weather, to third stage without shutting down or interrupting its run time. Using GE's ECM™ motor technology, the fan speed is matched to the specific air requirements in your home. The result is a consistent indoor environment throughout the entire heating and cooling season. The patented on demand hot water option simultaneously produces 100 per cent of your radiant in-floor and domestic hot water. This is the only system available in Canada to offer this kind of functionality and performance.

Innovative

This system is the only one of its kind in Canada. No other system offers simultaneous domestic hot water in both heating and cooling modes, full zoning capabilities and radiant in-floor heating while the two compressors provide redundancy.

Versatile

The NextEnergy 3-Series is equipped to satisfy all your heating, cooling and hot water needs. Giving you what you want, where you want it, when you want it. This system has been built structurally sound and reliable to provide you with years of comfort.

Silent

Its silent nature is a by-product of its double base plate rubber supported compressors and noise deadening insulation.

Intelligent

This microprocessor spirited system controls the optimization of energy, space conditioning, hot water requirements and up to 4 individual or combined zones throughout your home. With the NextEnergy 3-Series, you will never have to choose between comfort, hot water and efficiency.

Efficient

The NextEnergy 3-Series has been engineered with 2 compressors to operate either independently or collectively across 3 stages depending on the requirement. Standard features such as an ECM™ motor and load matching technology further enhance the high level of efficiency.

SYSTEM BENEFITS

- ✓ System Versatility
- ✓ Simultaneous Operation
- ✓ Dehumidification
- ✓ Personalized Comfort
- ✓ Simple Design
- ✓ Whisper Quiet Operation
- ✓ Zoning Capabilities
- ✓ Anytime Hot Water Generation
- ✓ Canada's Only 3-Stage System With Dual Compressors
